What is the Bus Safety Roadmap?

A roadmap has been developed by TRL to provide a guide for future developments of the BSS. This is needed because not all the safety features and systems are available immediately on buses. Some features will take time to develop and implement on buses because they are new and innovative. The bus industry has been consulted through the research process so that the timescales are realistic but challenging. The bus manufacturers will have to work with their supply chains to meet this demand.

This roadmap is the key tool for bus manufacturers and operators in understanding TfL’s requirements and will enable them to plan for the future. It will be an evolving document with regular updates so as to remain relevant. The Euro NCAP (European New Car Assessment Program) roadmap for passenger car safety has been used as the model approach. Historically, TfL’s bus procurement has been based on the specification of buses, and its requirements, which is essentially setting a minimum standard. The roadmap is now presenting a ‘Preferred’ date earlier than any ‘Required’ date. This ‘preferred’ date reflects when the vehicle or system might first enter the market in production by the market leader, to encourage the earlier adoption of safety systems. The ‘required’ date represents when multiple bus models would be expected to be available to the market and will typically follow a few years later.
