

Dima Nasr

**Aeronautical Engineering Instructor
Balamand Institute of Aeronautics**

What does your job involve on a daily basis?

After a considerable period of time spent in the industry, I joined the Balamand Institute of Aeronautics in October 2012 as a full time instructor. Among many other topics, I currently teach a topic very close to my heart, Gas Turbine Engines - Theory and Applications, to students enrolled in the Aircraft Maintenance Technology programme.

What are you most proud of in your career?

As an Aeronautical Engineer, throughout my career I have been fortunate enough to travel a lot, have experienced dealing with huge companies and have been able to visit their manufacturing and testing facilities. I try to share the passion I have for Aeronautical Engineering or “everything that flies”, like I would like to call it, with my students and equip them with the necessary knowledge to have an outstanding career.

What would you advise to someone interested in doing your job?

Being a female in a man’s business was never going to be easy, however with persistence and determination the sky is the limit. Eventually, everyone has oceans to fly, you just need the heart and the courage to follow your dreams.
